EDUCATION

Qatar University

Bachelor's of Science in Computer Science

Doha, Qatar

Expected Graduation, May 2026

- **Concentration:** Artificial Intelligence
- **Related Coursework:** Machine Learning, Artificial Intelligence, Software Engineering, Data Structures & Algorithms, Web Development, Operating Systems, Computer Networks & Communication, Reinforcement Learning, Object-Oriented Programming, Databases, Linear algebra

EXPERIENCE

Qatar Mobility Innovations Center (QMIC)

Artificial Intelligence Engineer Intern

Qatar Science & Technology Park, Doha

Jun 2025 – Aug 2025

- Developed an end-to-end vehicle localization pipeline on CCTV frames through detection, depth, and GPS fusion using YOLOv11, MiDaS, Flask, and Folium (Python library), enabling real-time traffic monitoring and vehicle direction analysis
- Implemented 3D bounding-box rendering on CCTV frames, overlaying 3D boxes on detected vehicles using YOLOv11 and DepthAnything/MiDaS
- Engineered per-vehicle distance estimation and GPS localization through depth-to-meter conversion and camera GPS fusion, providing precise vehicle location data for traffic analysis
- Deployed real-time vehicle tracking on a map through backend-frontend integration using Flask, and Ubuntu server

PROJECTS

RaceEye – Computer Vision Race Timing System | *Python, OpenCV, AprilTag*

Aug 2025 – Present

- Led a team in developing a computer-vision-based race timing system that replaced expensive RFID infrastructure with a single overhead camera and AprilTag-based runner identification
- Reduced race timing hardware costs by up to 93% compared to traditional RFID systems (18,000–30,000 QAR to 2,000–10,000 QAR)
- Built a real-time detection pipeline using Python, OpenCV, and AprilTag libraries, achieving 90% detection accuracy with ± 0.2 second timing precision
- Optimized detection speed using grayscale image processing and a dual-AprilTag shoulder design, enabling simultaneous tracking of up to 3 runners crossing the finish line

Banking Web App | *Next.js, React JS, Appwrite, Chart.js, Tailwind CSS, Sentry*

Jun 2025 – Present

- Built a banking app with a finance management dashboard using Next.js and React, enabling users to connect multiple bank accounts and view real-time transactions
- Implemented seamless peer-to-peer money transfers on the platform, leveraging Appwrite for backend services, authentication, and database management
- Designed interactive and responsive data visualizations with Chart.js and styled the application using Tailwind CSS and shadcn UI components
- Ensured robust application security and error monitoring by integrating Sentry, improving reliability and user trust

Career Bridge | *Python, Flask, HTML, CSS, PostgreSQL*

Sep 2024 – Sep 2024

- Designed and developed a job portal website with user account creation and job application features using Python and Flask
- Integrated Supabase and PostgreSQL to manage job listings and user applications efficiently
- Implemented password hashing techniques to securely store user credentials and enhance overall data protection

Course Registration System | *Java*

May 2024 – May 2024

- Designed a custom hash table in Java to manage course enrollments, integrating a queue for waitlists and a singly linked list for enrolled students
- Enabled accurate and efficient course registration with prioritized waitlisting and streamlined enrollment tracking
- Improved add/drop workflows by implementing robust error handling and ensured data persistence through object serialization in Java

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, HTML, CSS, MySQL, PostgreSQL, MATLAB

Frameworks & Libraries: Next.js, React JS, Flask, Prisma, YOLO, MiDaS, DepthAnything, DPT, Node.js, gymnasium, matplotlib

Tools & Platforms: Git, GitHub, VS Code, IntelliJ, Eclipse, Postman, Supabase, StarUML, Markdown

HONORS AND AWARDS

Qatar University

Dean's List for Spring and Fall Semesters at College of Engineering

Doha, Qatar

Mar 2023 – Mar 2023
